Genuine parts have reliable quality

Starting from product development to delivery, certified manufactures goes through extensive quality control. These genuine products are provided to maintain machine's performance and reducing malfunctions in the system.

Comparison Examples of Genuine v.s Generic

Filter Paper

* More surface area to filter out impurities

Genuine

Generic

Internal Filter Strength

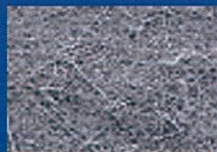

Genuine

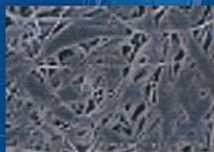

Generic

Filtering Material

* Genuine filter is more coarse compared to generic material

Genuine

Generic

TADANO

GENUINE OIL & FILTER

Are you forgetting to change your oil and replace your filters?

Oil

Hydraulic oil used in engine, transmission, etc. is necessary to maintain your crane's performance. Using oil that is not designed by manufacture may cause poor performance and decrease in durability due to internal erosion.

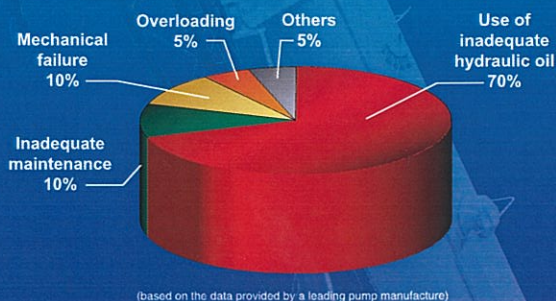

Filter

Cranes are often operated outdoors, an environment where there are clouds of dust and dirt. When dust enters the engine or pipes and passes through the filter, impurities may cause damage to functional parts or abnormal abrasion.

Genuine filters are designed to have the maximum filtering capacity to prevent impurities from entering the crane. Prescribed filter change is crucial to maintaining 100% of your crane's performance.

USE GENUINE PART!!

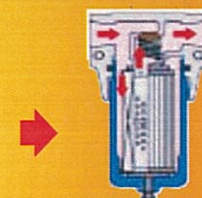

Cause of hydraulic machine failure

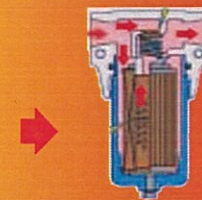

Advantages of periodical replacement

- *Cutting out repair hours, resulting longer operation hours.
- *Unnecessary repair cost will be reduced
- *Crane performance will be maintained in good condition

New hydraulic oil

Deteriorated hydraulic oil

When the filter element is clogged check valve will open.

Working flow
