

TNR GREASE

-GREASE for bigger size capacity crane boom-

☆ **Prevention of stick-slip phenomenon**

TNR GREASE is high viscosity grease, which hardly falls in drops. It also has a high load resistance property that allows us to prevent stick-slip phenomenon in stretching by application to the boom. Prevention of stick-slip phenomenon will extend the life of construction equipment.

*** Caution :**

As this grease has high viscosity property, do not use it for bearings

☆ **High viscosity grease**

As TNR GREASE has high viscosity property, it drops little and has improved adherability to the sliding surfaces of the boom. In addition, its blue appearance allows us to confirm the condition of application by visual inspection.

TNR GREASE is the optimal grease for the crane boom because it is the product that TADANO and DAZO designed through repeated tests on the real machines.

【Type of packaging】

- Pail can of 16 kg
- 2.5 kg can x 6 / 1 case
- 420 ml cartridge x 20 / 1 case

【GENUINE PARTS】

- : 370-028-01060
- : 370-028-01070
- : 370-028-01080

【Precautions in handling】

If you mix this high viscosity grease with the other grease, its performance will be reduced. In case the other grease is attached to an object for application, remove it with parts cleaning oil before application.
